

Photographs

Taking photos of your teeth and forwarding them to our dentists to comment is a very good way for us to provide a better recommendation on what dental procedures are suggested. We appreciate that getting clear pictures is not easy, but having a front view, with your lips retracted by your fingers and a top and bottom photo will assist.

When obtaining photos, please consider the following

- 1.The photographs should clearly show your teeth as per the examples below.
- 2.Photographs must be recent and certainly not more than 1 month old.
- 3.Photographs should be clear, and in focus. Those taken with a digital camera of more than 2 mega pixels are best.
- 4.When sending photographs through email, please consider the file size. Photos that are 2 or 3 megabytes are not required. Photos of 200 - 400 KB are usually adequate.

6. If you require additional information please either call us, send an email to info@dentisl-phuket.com or use the contact page on this websites
